Subject: RE: How much of PFOS and PFOA produced was used in AFFF?

Check out the review by Paul et al. ES&T, 2009, 43, 386 on p. 387 right column they quote ref 21 at being 5%. In our old review, we cite an EPA report for the 3% number but when I looked it up – I didn't find the nvalue. Must have cited the wrong docket document...pretty sure this is 3M data in a docket file.

Subject: How much of PFOS and PFOA produced was used in AFFF?

Good morning,

I am trying to figure out how much of the total production of PFOA and PFOS chemicals went into AFFF. I have been told 3% but I am not sure this is right. Any idea?

Thanks.

Laurence
